

# Ransomware outbreak response

Ransomware · **Critical** severity · SOC IR Playbook

---

Severity

Critical

## Detection & Analysis

- **Confirm encryption activity** — Validate mass file-rename / ransom notes; identify patient zero and the strain.

## Containment

- **Contain spread fast** — Isolate affected segments, disable the compromised accounts, block C2, suspend backups jobs from being encrypted.
- **Activate crisis process** — Notify the crisis lead; assess the regulator/notification clock; engage legal & comms.

## Eradication

- **Remove footholds** — Eliminate the actor's access, persistence and tooling across all touched hosts.

## Recovery

- **Restore from clean backups** — Validate backup integrity, restore by priority (RTO/RPO), rebuild domain trust if needed.

## Post-Incident

- **After-action review** — Document the decision log (incl. payment stance), report, and harden the entry vector.
