

Cloud/identity account takeover response

Account Compromise · **High** severity · SOC IR Playbook

Severity

High

Detection & Analysis

- **Confirm the takeover** — Validate impossible-travel/anomalous sign-in; identify the account and its privileges.

Containment

- **Revoke access** — Force sign-out, reset password, require MFA re-registration; revoke tokens and app grants.

Eradication

- **Remove persistence** — Delete attacker-created OAuth apps, inbox rules, MFA methods and any new admin roles.

Recovery

- **Assess blast radius** — Review federated SaaS access and data touched; reset affected sessions, notify app owners.

Post-Incident

- **Strengthen identity** — Tighten conditional access, review privileged roles, record lessons learned.
