

Data exfiltration response

Data Exfiltration · **High** severity · SOC IR Playbook

SeverityHigh

Detection & Analysis

- **Confirm and scope exfil** — Validate the DLP/anomalous-egress alert; identify the data, volume, channel and account.

Containment

- **Cut the channel** — Block the destination/cloud app, disable the account/path, preserve logs and evidence.

Eradication

- **Close the gap** — Remove the access path used; revoke credentials and any exfil tooling.

Recovery

- **Assess impact** — Scope which records/fields left; engage legal/DPO on notification obligations.

Post-Incident

- **Notify & remediate** — Customer/regulator notification as required; tune DLP and access controls.
